

MULTINORM FABRIC MADE WITH SUSTAINABLE FIBERS

Our commitment to the environment is present from the research and development of new fabrics, and is maintained throughout the manufacturing process. Following the green project that we started with Rmarko, we are glad to introduce you to our new multinorm fabric made with sustainable fibers: Smarko.

In this development, we have placed our focus on Tencel and organic cotton fibers, both recognized for their low environmental footprint. Thanks to their low CO2 emissions during the production process, we are able to say that we have successfully created a fabric collection that could reduce the carbon footprint by 25%.

Smarko is the sustainable version of our already known Marko fabric. The purpose of Smarko is to reduce Marina's environmental impact while simultaneously preserving its technical properties, to ensure people's protection for those working in various industries.

Smarko fulfills the European Standards of protective fabrics EN ISO (ISO 11612, EN 20471, IEC 61482-1-1, IEC 6148-1-2, EN ISO 1149-3 and EN 13034).

EN 11612

EN 61482-2

EN 11611

EN 1149-3

EN 13034

FACILITIES IMPROVEMENTS

We redesigned the factory and office facilities to achieve brighter spaces which allow us the reduction of artificial light.

CO2 REDUCTION

The introduction of our recycled and sustainable product lines, RMarko and SMarko, helps reducing the manufacturing process footprint.

REDUCING SOURCES AND REMAINS

The introduction of our recycled and sustainable product lines, RMarko and SMarko, helps reducing the manufacturing process footprint.

SOLAR PANELS

The installation of solar panels allows us to produce 20% of our energy used.

ENVIRONMENTAL COMMITTEE

Warning to our workers, producers and clients about the importance of recycling
We feel that if everyone contributes, we can make great and better changes.
